- **New pre-assembled kits**
- **Fully adaptable to user's needs**
- **Slope, platform, and angle bracket available**

Excellent Systems ramp kits have received numerous awards and distinctions for their ease of installation and precise adaptation to your needs. The kits consist of parts to be assembled from PELD or HDPE polyethylene, an environmentally friendly and recyclable product. The upper side is non-slip for extra safety use.

Once installed, the ramp can be used permanently or occasionally, as it is easily removable. Don't let thresholds and steps prevent the free movement of walkers or wheelchairs.

The ramp fits flush with the obstacle, so it does not interfere with the doorway. It can support a weight of 2 tons, which allows it to be used with vehicles. Non-toxic material, washable with standard detergents.

5 angle bracket models available in the desired dimensions
