

Saljol Carbon rollator

• **Lightweight, rigid, and scratch-resistant structure**

The Saljol carbon rollator has premium features. It is equipped with large, very flexible and shock-absorbing wheels to smooth out any irregularity (pathways (25 cm diameter at the front)). The curb ramps are cleverly positioned to make it easier to tilt the rollator. Cork is used for the contact parts (handles, brakes, folding handles), which absorbs shocks and heat, is UV and abrasion resistant, and remains non-slip even with wet hands. Equipped with more than 30 reflectors on the frame, tires, and handles, the user will be visible even in the dark. The bag supplied as standard is a smart bag that can be removed with one hand.

In addition to the Allround, the brakes are equipped with an adjustable partial braking system that limits the speed of the rollator when going downhill.

Available options : walking stick holder, Jost designer bag or an umbrella

The rollator brakes can be adapted for hemiplegic users with special cables

Overall dimensions : width 61 x depth 67 x height of handles 76 to 88 cm (M) or 81 to 103 cm (L).

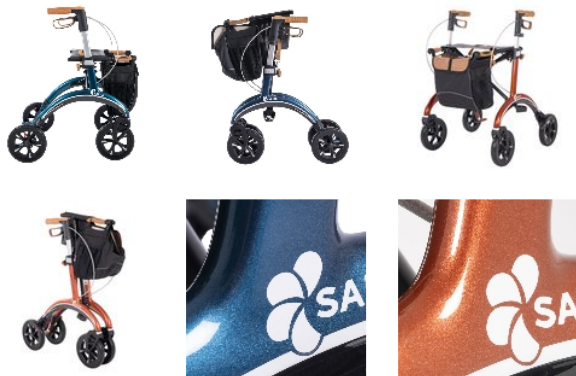

Seat dimensions : width 45 x depth 18.5 x height 54 cm (M) or 62 cm (L).

Weight : 5.8 kg.

Maximum user weight : 150 kg
